

# UTC PUBLIC ADDRESS AUDIO COMPONENTS

A quality line of popular-priced transformers incorporating conservative design and construction to assure dependability under the most adverse operative and climatic conditions. Uniform drawn cases finished in telephone black enamel with threaded inserts for top or bottom mounting. These units are professional in appearance and suited for continuous commercial service in amplifiers and transmitters. All items are poured with special moisture-proof sealing compound in addition to vacuum impregnation of coil structures. Items in same case size have approximately the same weight, as noted below.

PA-132, PA-134, 135 and 136 are of the hum-bucking type, so windings on input transformers are balanced and may be used for 250 ohm circuits.
