

ALUMINUM FRAME RACKS

- *They come apart with 10 bolts, will fit in most cars!*
- *Very high quality, lightweight!*

May be cut down to any height.

Use fine tooth carbide table/radial/circular saw, etc.

They will **break down** and will likely fit into most cars.

They bolt together.

Take it home today!

BUY TWO and you can make a 4 post enclosed or open rack, if you want that style. The mfr does just this for their 4 post open and enclosed models.

FLIP the base pedestals and add steel or aluminum angle or square/rectangular extrusions, ADD heavy duty casters/wheels and get a wider more stable base that is easy to roll!

I'm going to cut up one into 4 short posts and make some nice equipment cabinets for rack mounted receivers... you have to add sides, top & bottom and drill and bolt to finish...
(have you priced equipment cabinets lately??)

asking *\$55 each*

...want two or more? Let's talk!
